Groundwater Wellhead Protection Areas

Wellhead Protection Areas (ODEQ)

The Oklahoma Wellhead Protection program is part of a federal program geared to improving drinking water quality by protecting the sources of drinking water. The goal of Oklahoma's Wellhead Protection program is to minimize the risk of pollution by limiting activities on the land around public water supply wells that might cause pollution. For more information or to access the data please contact ODEQ (<http://www.deq.state.ok.us>)
