Re: Martin Marietta's Washita Quarry (formerly Boral's Davis Quarry)  
Site Specific Water Management and Conservation Plan *Addendum*

Martin Marietta submits this Addendum to the Site Specific Water Management and Conservation Plan for its Washita Quarry facility submitted to the Oklahoma Water Resource Board on December 28, 2012 for BCM Davis Quarry.

**Response to Extreme Wet Weather Conditions**

Martin Marietta recognizes the fact that offsite discharge may impact downstream neighbors adversely during extreme weather conditions of heavy or extended rain that have caused flooding. As such, we strive for effective management of water during flooding conditions with the community's well-being in mind.

During such conditions, and in order to protect our downstream neighbors, TXI's Mill Creek operation will endeavor to store rainfall and runoff collected at our facilities. The decision to discharge stored runoff will be made on a case-by-case basis, and will be based on a number of factors, including but not limited to the potential for impact to plant equipment, production volumes, and the downstream floodplain.

Sincerely,

A handwritten signature in cursive script that reads 'Robin L. Simmons'.

Robin L. Simmons  
Land Manager
