WaterIsLife straw
3 Charcoal Filter
Water passes through the final charcoal grates, removing any bad tastes and providing fresh, safe water.
2 Iodine Crystals
Next, the water passes through an iodine filtration system to eliminate diseases.
1 Membrane Filter
Whe the straw hits the water the first chamber filters particles, membranes and molecules.
This year 1.8 million people will die due to waterborne disease -- the majority are children.
Imagine a small, portable filtration straw that hangs around a child's neck that guarantees them clean drinking water for a year, wherever they are. This purification straw, proven effective against waterborne diseases, acts as a filtration tool that cleanses impure water, no matter how unsanitary it may be.
There is no life without water. Join WaterIsLife today in providing these water-straw filters to thousands of children all over the world.
One straw. One life. You can be a part of the solution...
