

This is a detailed topographic map of the Clinton NW Foss Reservoir area in Oklahoma. The map features contour lines indicating elevation, with labels such as 2600, 2800, and 3000 feet. A grid system is overlaid on the map, with coordinates ranging from 96° 55' 30" to 97° 00' 00" longitude and 35° 45' 00" to 36° 00' 00" latitude. The map shows the Foss Reservoir and surrounding terrain, including roads, railroads, and various place names. The map is labeled "ALEDO SE, OKLA." at the top and "CLINTON NW FOSS RESERVOIR" at the bottom. A scale bar is located in the upper right corner, showing distances in miles and feet. The map is oriented with North at the top.

3599-441

The figure displays three horizontal scales used for measuring distance. The top scale is labeled '1 MILE' at both ends and has major tick marks every 1000 feet, with intermediate tick marks every 500 feet. The middle scale is labeled '7000 FEET' at the right end and has major tick marks every 1000 feet, with intermediate tick marks every 500 feet. The bottom scale is labeled '1 KILOMETER' at both ends and has major tick marks every 500 meters, with intermediate tick marks every 250 meters.

☐ 1 acre ☐ 10 acres ☐ 20 acres

ACREAGE GUIDE

Other information including a narrative report concerning the wetland resources depicted on this document may be available. For information, contact:

Regional Director (ARDE) Region II
U.S. Fish and Wildlife Service
P.O. Box 1306
Albuquerque, New Mexico 87103

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible hydrology, and geography in accordance with Classification of Wetlands and Deepwater Habitats of the United States (FWS/OBS - 79/31 December 1979). The aerial photographs typically reflect conditions during the spring year and season when they were taken and, therefore, the specific timing of error inherent in the use of the aerial photographs. Thus, details on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some small wetlands and those obscured by dense forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. **Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local agencies in determining specific agency regulatory jurisdiction and proprietary jurisdiction that may affect such activities.**

0 - Primarily represents upland areas, but may include unclassified wetlands such as man-modified areas, non photo-identifiable areas and/or unintentional omissions.

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Additions or corrections to the Wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Subclasses, Classes, Subclasses, and Water Regimes in *italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
- Some areas designated as R4SB, R4SBW, OR R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
- This map uses the class Unconsolidated Shore (US). On earlier NWI maps that class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.
