

NATIONAL WETLANDS INVENTORY
UNITED STATES DEPARTMENT OF THE INTERIOR

DRAFT

CERROGORDO, ARK- OKLA. 3394-433

SPECIAL NOTE

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified by the use of stereoscopic techniques and hydrology and geomorphology in accordance with *Classification of Wetlands and Deepwater Habitats* (FWS/OBS-83-30) by the U.S. Fish and Wildlife Service (FWS) (AN Operation Draft). Cowardin et al., 1977. The aerial photographs typically were taken in the summer. In addition, there is a margin of error inherent in the use of the stereoscopic technique. The use of aerial photographs for historical analysis of a single site may result in a revision of the interpretation of the site. In addition, some small wetlands and those obscured by dense forest cover may not have been identified by the Federal, State and local regulatory agencies with jurisdiction over the site. The use of aerial photographs was not in different manner than that used in this inventory. There is no attempt in either the aerial photographs or this inventory to identify the location of any of the proprietary jurisdiction of any Federal, State or local government or to establish the ownership of any land. The purpose of this inventory is to identify wetlands. Persons intending to engage in activities in the wetlands should consult with the appropriate Federal, State or local agency for advice of appropriate Federal, State or local agencies concerning specified agency regulatory programs or requirements.

NOTES TO THE USER

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Dominance type (either vegetative or sedentary animal) can be added to the map by the interested user.
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
