

NATIONAL WETLANDS INVENTORY
UNITED STATES DEPARTMENT OF THE INTERIOR

IMAGED

DRAFT

DANIELS CHAPEL, TEX.-ARK.-OKLA. 3394-422

SPECIAL NOTE

This document was prepared primarily for the analysis of high altitude aerial photographs. Wetlands were identified and mapped using the following procedures: hydrology and geography in accordance with *Classification of Wetlands and Deepwater Habitats* (National Wetlands Inventory, United States Army Operational Draft, Cowardin, et al. 1977). The aerial photographs typically reflect conditions during the summer months. Therefore, the presence of water in the photograph is a margin of error inherent in the use of the photographs. The use of aerial photographs for the historical analysis of a single site may result in a revision of our interpretation. In addition, some small areas of wetland obscured by dense forest cover could not be included on the map.

Federal, State and local regulatory agencies with jurisdiction over the wetlands of this area were contacted and a different manner than the use of aerial photographs. No attempt, in either the design or products of this inventory, was made to identify or delineate the boundaries of Federal, State or local government or to establish the jurisdiction of any agency. The purpose of this inventory is Federal. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should consult the appropriate Federal, State or local regulatory agencies concerning specified agency regulatory programs.

SYMBOLGY EXAMPLE

NOTES TO THE USER

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Dominance type (either vegetative or sedentary animal) can be added to the map by the interested user.
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
