**SPECIAL STUDY**—This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible hydrology, and geography in accordance with **Classification of Wetlands and Deepwater Habitats of the United States (FWS/OBS - 79/31 December 1979)**. The aerial photographs typically reflect conditions during the specific year and season when they were taken. In addition, there is a margin of error inherent in the use of the aerial photographs. As a result, a detailed on the ground and historical investigation of a single site may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some small wetlands and those obscured by dense forest cover may not be included on this document.

### SYMBOLGY EXAMPLE

- NOTES TO THE USER
  - Wetlands which have been field examined are indicated on the map by an asterisk (\*)
  - Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
  - Subsystems, Classes, Subclasses, and Water Regimes in *italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping
    - Some areas designated as R4SB, R4SW, OR, or R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
  - This map uses the class Unconsolidated Shore (US). On earlier NWI maps that class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.
