Albuquerque, New Mexico 87103**

### SPECIAL NOTE

**SPECIAL NOTE**

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible water, and other features in accordance with the classification of Wetlands and Deepwater Habitats of the United States (FWS/OBS - 79/31 December 1979). The aerial photographs typically reflect conditions during the specific year and season when they were taken. In addition, there is a margin of error inherent in the use of the aerial photographs. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through the photographs interpretation. In addition, some small wetlands and those obscured by dense forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over wetlands may design and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. **Persons intending to engage in activities involving alterations within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.**

### SYMBOLGY EXAMPLE

A diagram illustrating the nested hierarchy of habitat classification levels. It shows a large irregular shape representing the 'SYSTEM'. Inside it is a smaller shape representing the 'SUBSYSTEM'. Within the subsystem is a shape representing the 'CLASS', labeled 'L2EM2F'. Inside the class is a shape representing the 'SUBCLASS, WATER REGIME', labeled 'U'. Within the subclass is a shape representing the 'UPLAND (NON-WETLAND)'. At the bottom is a shape representing the 'R20WH (LINEAR DEEPWATER HABITAT)'.

## NOTES TO THE USER

- **NOTES TO THE USER**
  - Wetlands which have been field examined are indicated on the map by an asterisk (\*)
  - **Additional corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.**
  - Subsystems, Classes, Subclasses, and Water Regimes in *italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
  - Some areas designated as R4SB, R4SBW, OR R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
  - This class uses the class Unconsolidated Shore (US).
  - On earlier NWI maps that class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.
