

NATIONAL WETLANDS INVENTORY
UNITED STATES DEPARTMENT OF THE INTERIOR

This is a detailed topographic map of the Blacksburg, Virginia area. The map shows the Potomac River flowing through the center, with Skiatook Creek and other smaller waterways. The terrain is characterized by numerous contour lines indicating elevation. Key locations include Blacksburg, Skiatook, and various smaller settlements and farms. The map is labeled with numerous place names, including Blacksburg, Skiatook, and various smaller settlements and farms. The map is a black and white reproduction of a historical map, likely from the 19th century, given the style and the mention of 'INTERIOR GEOLOGICAL SURVEY' in the bottom right corner.

AVANT SE, OKLA.

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation patterns. The results of this analysis are presented in accordance with Classification of Wetlands and Deepwater Habitats of the United States (FWS/OBS - 79/31 December 1979). The aerial photographs used were taken during the summer of 1978, one year and season when they were taken. In addition, there is a margin of error inherent in the use of the aerial photographs. The use of aerial photographs for the analysis of a single site may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over the area and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction, to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities on the wetlands should consult with the appropriate State or local agencies to determine if the proposed activities in the areas should seek the advice of appropriate Federal, State or local agencies concerning specific agency regulatory programs and proprietary jurisdictions that may affect

The diagram illustrates a nested classification system for a wetland. It features a large, irregular shape representing the 'SYSTEM'. Inside this shape is a smaller, more defined area labeled 'SUBSYSTEM CLASS'. Within the subsystem class is an even smaller area labeled 'L2EM2F'. To the right of the subsystem class, a label 'SUBCLASS, WATER REGIME' points to the boundary between the subsystem and the rest of the system. Inside the subsystem class, there is a small, roughly circular area labeled 'UPLAND (NON-WETLAND)'. At the bottom of the diagram, a label 'R20WH (LINEAR DEEPWATER HABITAT)' points to a specific area within the subsystem class.

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Subsystems, Classes, Subclasses, and Water Regimes in *Italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
- Some areas designated as R4SB, R4SBW, OR R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
- This map uses the class Unconsolidated Shore (US).
- The US and SWI maps that class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.
