

Topographic map of the Beaver South area. The map features a grid with coordinates ranging from 36°37'30" N to 36°30' N and 100°52'30" W to 100°45' W. Key locations marked include PUSAN, PUSCH, PUSAX, and PUSCH. The map also shows various landmarks such as Bryan's Corner (Balko PO), Radio Tower, and several wells (Gas Well, Oil Well). The title 'BEAVER SOUTH' is prominently displayed in the center. The map is bordered by Perryton NE, Beaver, and Bryan's Corner, OKLA. at the bottom.

BRYANS CORNER, OKLA.

U.S. DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE
Prepared by National Wetlands Inventory

1989

SPECIAL NOTE

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible water, and other features. The report is a revision of *Wetlands and Deepwater Habitats of the United States (FWS/OBS - 79/31 December 1979)*. The aerial photographs typically reflect conditions during the specific year an image was taken. In addition, there are several margins inherent in the use of the aerial photographs. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some small areas may be obscured by dense forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities in wetlands within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

SYMBOLOLOGY EXAMPLE

The diagram illustrates a nested classification system for a wetland. It features a large irregular shape representing the 'SYSTEM'. Inside this is a smaller shape representing the 'SUBSYSTEM'. Within the subsystem is a shape labeled 'L2EMZF', which is further divided into 'CLASS' and 'SUBCLASS, WATER R'. Below the subsystem is a shape labeled 'UPLAND (NON-WETLAND)' containing the symbol 'δ'. At the bottom is a shape labeled 'R2OWH (LINEAR DEEPWATER HABITAT)'.

U – Primarily represents upland areas, but may include unclassified wetlands such as man-modified areas, non photo-identifiable areas and/or unintentional omissions.

NOTES TO THE USER

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Subsystems, Classes, Subclasses, and Water Regimes in *Italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
- Some of the designations, such as R4SBW, OR R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
- This map uses the class Unconsolidated Shore (US).
- On earlier NWI maps that class was designated Beach/Bar (B), or Flat (FL). Subclasses remain the same in both versions.
