ACREAGE GUIDE

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible water, and other features. The results of this analysis are presented in the **Map of Wetlands and Deepwater Habitats of the United States (FWS/OBS - 79/31** (December 1979). The aerial photographs typically reflect conditions during the specific year and season when they were taken. In addition, there are limitations to the use of aerial photographs in wetland photography. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic analysis. In addition, some small wetlands and those obscured by dense forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

SYSTEM
SUBSYSTEM
CLASS
L2EM2F
SUBCLASS. WATER REGIME
UPLAND (NON-WETLAND)
R2OWH
(LINEAR DEEPWATER HABITAT)

U – Primarily represents **upland** areas, but may include unclassified wetlands such as man-modified areas, non photo-identifiable areas and/or unintentional omissions.

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Additions or corrections to the wetlands information displayed on the map are solicited. Please forward such information to the address indicated.
- Subsystems, Classes, Subclasses, and Water Regimes in *italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
- Some are designated as R4BSW, OR R4BSJ (INTERMITTENT STREAMS) may not meet the definition of wetland.

This map uses the class Unconsolidated Shore (US). On the 1984 NWI maps that class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.
