

This is a detailed topographic map of the Hackberry area in Texas. The map features contour lines indicating elevation, with major contours at 1000, 2000, and 3000 feet. A network of roads is shown, including Highway 17 and Highway 26. Numerous well locations are marked with codes such as PUBH, PUSC, PEMIA, PUSCH, and PUSBA. The map is overlaid with a grid showing latitude and longitude coordinates. A scale bar at the bottom indicates distances in miles and feet. The map is titled "HACKBERRY" in the center.

GUYMON SE, OKLA.

Other information including a narrative report concerning the wetland resources depicted on this document may be available. For information, contact:

### SPECIAL NOTE

**SPECIAL NOTE**  
This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible hydrology, and geography in accordance with Classification Criteria for Wetlands (U.S. Fish and Wildlife Service, Wetlands FWS/OBS-79/31 December 1979). The aerial photographs typically reflect conditions during the specific year and season when they were taken. In addition, there may be some areas that are not visible in the aerial photographs. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic analysis. Areas that are not visible in the aerial photographs, obscured by dense forest cover may not be included on this document.

State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to suggest that the design or products of the U.S. Fish and Wildlife Service, Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities requiring modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local agencies concerning specified agency regulatory requirements and proprietary jurisdictions that may affect such activities.

### SYMBOLGY EXAMPLE

## NOTES TO THE USER

- ### NOTES TO THE USER
- Wetlands which have been field examined are indicated on the map by an asterisk (\*).
  - Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
  - Subsystems, Classes, Subclasses, and Water Regimes *in force* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
  - Some areas designated as R4SB, R4SBB, OR R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
- This map uses the class Unconsolidated Shore (US).  
 The US class is subdivided into two subclasses: USB (US with Bar) and USF (US with Flat). The USB class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.
