

SPECIAL NOTE

SPECIAL NOTE

This document was prepared primarily by stereoscopic aerial photographs taken at high altitude. Wetlands were identified on the photographs based upon vegetation, visible water, and other features. The accuracy of the map regarding hydrology, and geography in accordance with the National Wetlands Inventory (NWI) of the United States (An Operational Draft), Cowardin, et al. 1977. The results of aerial photography typically reflect conditions during the aerial photograph season when they were taken. In addition, first year season when they were taken. In addition, there is a margin of error inherent in the use of aerial photography. Thus, a detailed ground truthing and historical analysis of a single wetland may result in a revision of the wetland classification established through photographic interpretation. In addition, some small wetlands and those obscured by dense forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any State or local government or to establish the
