Diagram illustrating the conversion of distance from feet to kilometers. The top scale shows distances in feet (0 to 7000), and the bottom scale shows distances in kilometers (0 to 1). A double-headed arrow indicates the distance between the two scales.

 10 acres

ACREAGE GUIDE

Regional Director (ARDE) Region II
U.S. Fish and Wildlife Service
P.O. Box 1306
Albuquerque, New Mexico 87103

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible water, and other features. The report is a revision of the *Inventory of Wetlands and Deepwater Habitats of the United States* (FWS/OBS - 79/31 December 1979). The aerial photographs typically reflect conditions during the specific year and season when they were taken. In addition, there are limitations to the use of aerial photographs and their interpretations. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some small wetlands and those obscured by dense forest cover may not be included on this document.

SYMBOLGY EXAMPLE

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Additional correspondence for the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Subsystems, Classes, Subclasses, and Water Regimes in *Italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
- Some areas designated as R4SB, R4SBW, OR R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
- This map uses the class Unconsolidated Shore (US). On USGS 1:250,000 maps that class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.
