Albuquerque, New Mexico 87103**

SPECIAL NOTE

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visual texture, and topography. The project was directed by the U.S. Fish and Wildlife Service, *Deep-Water Habitats of the United States* (An Operational Draft), Cowardin, et al. 1977. The aerial photographs typically reflect conditions during the same specific year and season when they were taken. In the case of this report, there is a large time gap between the use of the aerial photographs and the field work. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some small wetlands and other features may be obscured by dense forest cover may not be included on this

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities in-
