

This is a highly detailed topographic map of a rugged mountain landscape. The terrain is characterized by steep slopes, sharp ridges, and deep valleys, all delineated by fine contour lines representing elevation changes. A grid system is overlaid on the map, with numerical indices running horizontally across the bottom from 1 to 33. Numerous points are marked with codes such as POWHx, PFOIA, RASBC, PEMICH, L2USch, and P6SIFh, which likely denote specific locations or survey points. A large, central peak is identified with the label 'P.S.N.'. Other notable features include winding paths or roads, smaller peaks, and areas labeled 'Carter's Corner' and 'Artisan's Inlet'. The overall appearance is that of a technical or military-style map used for navigation and terrain analysis.

### NOTES TO THE USER

- Wetlands which have been field examined are indicated on the map by an asterisk (\*).
- Dominance type (either vegetative or sedentary animal) can be added to the map by the interested user.
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Some areas designated R4SB, R4SBW, or R4SBJ (intermittent streams) may not meet the definition of wetlands.

Prepared by Office of Biological Services  
for the National Wetlands Inventory

### SPECIAL NOTE

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visual texture, and other features. The report includes a description of Wetlands and Deep-Water Habitats of the United States (An Operational Draft), Cowardin, et al. 1977. The aerial photographs typically reflect conditions during the specific year and season when they were taken. In a final report, the aerial photographs will be used to revise the aerial photographs. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some small wetlands and those with dense forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas.
