VAN OSS, OKLA.

SCALE 1:24 000

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified by differences in vegetation, visible hydrology, and topography in accordance with the methodology of *Wetlands and Deep-Water Habitats of the United States* (An Operational Draft), Cowardin, et al, 1977. The aerial photographs typically reflect conditions during the summer months, and therefore, the seasonal hydrologic condition, there is a margin of error inherent in the use of the aerial photographs. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic analysis. In addition, some small wetlands and those obscured by dense forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

FARMED WETLANDS

CONTROLLED WATER REGIME

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Dominance type (either vegetative or sedentary animal) can be added to the map by the interested user.
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Some areas designated R4SB, R4SBW, or R4SBJ (intermittent streams) may not meet the definition of wetlands.
