~~WEATHER FORD~~ GEOLOGICAL SURVEY

WATONGA

SCALE 1 24 000

Other information concerning the wetland resources depicted on this document may be available. For information, contact:
Regional Director (ARDE) Region II
U.S. Fish and Wildlife Service
P.O. Box 1306
Albuquerque, New Mexico 87103

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified by the use of aerial photographs and by the use of hydrology, and geography in accordance with Classification of Wetlands and Deep-Water Habitats of the U.S. Army Corps of Engineers (1977). The aerial photographs typically reflect conditions during the specific year and season when they were taken. The use of the aerial photographs, thus, detailed on the ground and historical analysis of a single site is not possible. The aerial photographs were interpreted through photographic interpretation. In addition, some small wetlands and those obscured by dense forest cover may not be detected on these photographs.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and regulate wetlands differently. It is the policy of the U.S. Army Corps of Engineers that there is no attempt, in either the design or products of this inventory, to suggest that the U.S. Army Corps of Engineers, Federal, State or local government or to establish the geographical scope of the regulatory programs of government. The U.S. Army Corps of Engineers is not responsible for modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local regulatory agencies. The U.S. Army Corps of Engineers and proprietary jurisdictions that may affect such activities.

NOTES TO THE USER

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Dominance type (either vegetative or sedentary animal) can be added to the map by the interested user.
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Some areas designated R4SB, R4SBW, or R4SBJ (intermittent streams) may not meet the definition of wetlands.

WETLAND LEGEND

U - Primarily represents upland areas, but may include unclassified wetlands such as man-modified areas, non photo-identifiable areas and/or unintentional omissions.

* All other classes are found in all Riverine Ecological Subsystems.

(1) Information on the water regime modifiers found on this legend, but not found in the classification system, may be obtained from the above listed source.
