Education Efforts
Abundant and Fruitful

Mike Mathis
State Floodplain Coordinator, OWRB

Last January, the OWRB hosted an extremely successful week-long workshop for state floodplain officials entitled “Managing Floodplain Development Through the NFIP.” Held in Norman under the tutelage of instructors Ken Morris, of the OWRB, and Lonnie Ward, with the Federal Emergency Management Agency, the classes culminated in a two-hour examination for 31 local officials seeking to become Certified Floodplain Managers (CFMs). The CFM program, established by the Association of State Floodplain Managers, recognizes continuing education and professional development that enhance the knowledge and performance of local, state, federal, and private-sector floodplain managers. I’m happy to report that all 31 individuals who took the test passed, attesting to their advanced knowledge of NFIP standards and procedures and the Oklahoma Floodplain Management Act. I’d like to thank the members of the Oklahoma Floodplain Management Association, our partners in this effort, for making this workshop our most successful ever, as well as the OWRB’s Rhonda Bowers, who reviewed the CFM applications and class enrollment procedures.

The OWRB’s annual Floodplain 101 Workshops represent extremely beneficial training exercises. This year’s sessions, held throughout the state in May, featured a Natural Resource Conservation Service (NRCS) representative who presented a short-course on the agency’s Wetlands Restoration Program. Wetlands are just one of the many important benefits provided through Oklahoma’s vital floodplain areas.

Through a proclamation signed recently by Gov. Henry, Oklahomans once again observed Flood Awareness Month in May, and Flood Insurance Month was celebrated in March. Each year, these proclamations provide critical assistance to the OWRB and our floodplain management partners in “getting the word out” about wise development and the persistent dangers posed by floodwaters.

Through a grant from Oklahoma Emergency Management, the OWRB is compiling a database of repetitive loss structures in Oklahoma. Among associated tasks, staff will verify addresses, take digital photos, and obtain longitudes and latitudes of these structures. This information will prove vital in mitigating future flooding disasters, especially in securing funds to remove these structures from harm’s way. On a related note, OWRB staff are revising the Guidebook for Local Floodplain Ordinance Administrators and working to develop Oklahoma’s Floodplain Management 101 Textbook. These educational materials can be used as a home study course, CFM study guide, and textbook for the OWRB’s Floodplain Management 101 workshops.

In April, the Governor signed legislation establishing accreditation standards for Oklahoma’s floodplain administrators. The OWRB will administer the training accreditation provisions of the new law, House Bill 2284, which was introduced this session by Representative Thad Balkman and Senator Bruce Price. The bill will play a vital role in floodplain management.

Severe flooding from more than five inches of rainfall on March 4 damaged some 278 residences, businesses, and other structures in the Town of Kingfisher. Water rose to nearly five feet in some areas of the community.
Spring Floodplain Workshops

The OWRB’s floodplain administrator workshops, held each spring, are key aspects of the Board’s continuing education and public information effort through the National Flood Insurance Program (NFIP) and are a primary focus of Oklahoma’s annual statewide flood awareness campaign.

The five workshops held throughout Oklahoma (in McAlester, Lawton, Woodward, Bartlesville, and Midwest City) in May 2004 not only serve to provide community officials with the latest information concerning the operation and benefits of the NFIP, they point out the extreme importance of annual training to the local floodplain manager. Such training heightens confidence in the enforcement and administration of local flood ordinance and are key ingredients in the OWRB’s goal of establishing ownership at the local level.

May is Flood Awareness Month in Oklahoma

Flood Safety Tips

- Avoid walking through floodwater. Water only six inches deep can sweep you off your feet if it is moving swiftly.
- Do not drive into a flooded street. Cars can be swept away by two feet of moving water. If you come to a flooded area, turn around and go another way. Most flood-related deaths are caused by people driving through high water.
- Watch out for fire hazards. Be aware of broken or leaking gas lines, flooded electrical circuits, electrical appliances, and flammable materials coming from upstream.

After the Flood:

- Take care of yourself first. Protect yourself and your family from stress, fatigue, and health hazards that follow a flood.
- Dry out your home. Floodwaters damage materials, leave mud, silt and unknown contaminants, and promote the growth of mildew.
- Restore the utilities. Cleaning up after the flood will be much easier if you have heat, electricity, clean water, and sewage disposal.
- Clean up. The walls, floors, closets, shelves, contents and other flooded areas of your home should be thoroughly washed and disinfected.
- Rebuild and flood proof. Take time to rebuild correctly and make improvements that will protect your building from future floods.
- Prepare for the next flood. Protect yourself with flood insurance, a flood response plan, and community flood protection programs.
